

Reproducible Builds for the JVM and beyond

Hervé Boutemy

Halifax, NS, 2023-10-10

COMMUNITY
THE ASF CONFERENCE
CODE

About Me

- Maven PMC Member, Attic PMC Chair
- ASF Member
- working on Software Supply Chain @ Sonatype
- SBOM: CycloneDX, SPDX
- signature: Sigstore

- Reproducible Builds for the JVM:
 - discovered in [April 2016](#) (post-processing)
 - actively working since January 2019 (Maven built-in)

Agenda

- Reproducible Builds
 - what? why? how?
- Reproducible Builds for the JVM
 - checking against Maven Central
 - configuring for Maven, Gradle, sbt
- Quiz: to be or not to be Reproducible
- What's next?

Reproducible Builds: what? why? how?

Reproducible Builds

<https://reproducible-builds.org/> (since 2013)

a set of software development practices that create an independently-verifiable path from source to binary code

input source code

builder

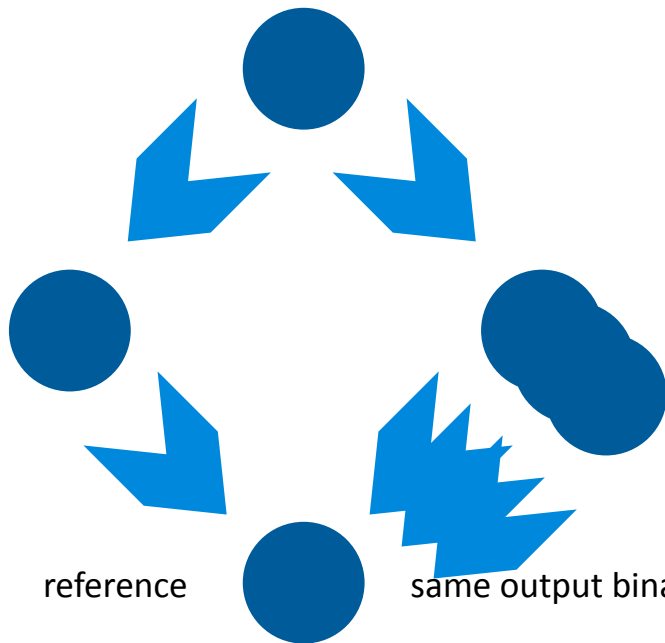

output binaries

reference

reference

rebuilder

same output binaries (bit for bit)

Why does it matter?

- reproducible-builds.org:
“allow verification that no vulnerabilities or backdoors have been introduced during the compilation process”
- my own return on experience
 - you have the source, but are you *really* able to rebuild?
 - is it the real Git commit? is “Build successful” message sufficient?
 - are you sure nothing from your build environment leaked into output binaries?
 - found username, hostname, path to current directory, private key passphrase, ...
 - permits build efficiency from build cache
- **ASF policy: official source release vs convenience binaries**
 - how do you audit binaries staged by release manager? “Just trust”?

How?

- reproducible-build.org:
 1. the build system needs to be made entirely deterministic.
For example, the current date and time must not be recorded and output always has to be written in the same order.
 2. the set of tools used to perform the build and more generally the build environment should either be recorded or pre-defined.
 3. users should be given a way to recreate a close enough build environment, perform the build process, and validate that the output matches the original build.

Reproducible Builds for the JVM:

2. check binaries: Maven Central
1. configure build: Maven, Gradle, sbt

Reproducible Central (started 03-2020)

<https://github.com/jvm-repo-rebuild/reproducible-central>

1. Tools and methods allowing to verify that Java builds are reproducible

2. A list of reproducible releases published to Maven Central

rebuilding 2611 releases of 550 projects:

- 2027 releases are confirmed fully reproducible (100% reproducible artifacts ✓),
- 584 releases are only partially reproducible (contain some unreproducible artifacts ⚠)
- on 550 projects, 439 have at least one fully reproducible release, 111 have none

Reproducible Central

<https://github.com/jvm-repo-rebuild/reproducible-central>

Rebuild Detailed Results [↗](#)

Central Repository groupId	artifactId(s)	versions	result: reproducible?
biz.aQute.bnd	bnd-plugin-parent	8	8 ✓

Project: org.apache.maven.plugins:maven-javadoc-plugin

Source code: <https://github.com/apache/maven-javadoc-plugin>

rebuilding 8 releases of org.apache.maven.plugins:maven-javadoc-plugin:

- 5 releases were found successfully fully reproducible (100% reproducible artifacts ✓),
- 3 had issues (some unreproducible artifacts ⚠️, see eventual 🔍 diffoscope and/or 📄 issue tracker links):

version	build spec	result: reproducible?	size
3.6.0	mvn jdk17	result: 5 ✓ 1 ⚠️ 🔍 📄	4.6M
3.5.0	mvn jdk8 w	result: 4 ✓	4.2M
3.4.1	mvn jdk8 w	result: 4 ✓	4.2M
3.4.0	mvn jdk8 w	result: 4 ✓	4.2M
3.3.2	mvn jdk8 w	result: 4 ✓	4.2M
3.3.1	mvn jdk8 w	result: 3 ✓ 1 ⚠️	4.2M
3.3.0	mvn jdk8 w	result: 4 ✓	4.1M
3.2.0	mvn jdk8	result: 3 ✓ 1 ⚠️	4.0M

<https://diffoscope.org/>

3. Why? How to Fix?

diffoscope

In-depth comparison of
files, archives, and
directories.

Reproducible Builds for the JVM:

2. check binaries: Maven Central
1. configure build: Maven, Gradle, sbt

Reproducible Builds for Maven (since 03-2020)

<https://maven.apache.org/guides/mini/guide-reproducible-builds.html>

1. Enable Reproducible Builds:

```
<properties>  
  <project.build.outputTimestamp>2023-01-01T00:00:00Z</project.build.outputTimestamp>  
</properties>
```

2. Check plugins known to require upgrade: `mvn artifact:check-buildplan`
= <https://maven.apache.org/plugins/maven-artifact-plugin/plugin-issues.html>

Checking for Reproducible Builds

3. after release pushed to Maven Central:

```
mvn -Papache-release -Dpgg.skip clean verify artifact:compare
```

2. during VOTE:

```
mvn -Papache-release -Dpgg.skip clean verify artifact:compare  
-Dreference.repo=https://repository.apache.org/content/repositories/staging/
```

1. during SNAPSHOT development:

Check locally if you get the same result twice

```
mvn clean install
```

```
mvn clean verify artifact:compare
```

ideally (harder): rebuilder on a different machine, or Docker, to detect more subtle environment impact

Reproducible Builds for Gradle

- since Gradle 3.4
https://docs.gradle.org/current/userguide/working_with_files.html#sec:reproducible_archives

```
 Kotlin Groovy
★ build.gradle

tasks.withType(AbstractArchiveTask).configureEach {
    preserveFileTimestamps = false
    reproducibleFileOrder = true
}
```

Gradle in Reproducible Central

Project: [org.mockito:mockito-core](#)

Source code: <https://github.com/mockito/mockito.git>

► This project defines 8 modules:

rebuilding 18 releases of org.mockito:mockito-core:

- 15 releases were found successfully fully reproducible (100% reproducible artifacts ✓),
- 3 had issues (some unreproducible artifacts ⚠, see eventual 🔍 diffoscope and/or 📄 issue tracker links):

version	build spec	result: reproducible?	size
5.6.0			
5.5.0	gradle	result: 15 ✓ 4 ⚠ 🔍	1.3M
5.4.0	gradle	result: 19 ✓	1.3M
5.3.1	gradle	result: 19 ✓	1.3M
5.2.0	gradle	result: 19 ✓	1.3M

Need Help!

Reproducible Builds for sbt

Project: **com.scalapenos:stamina_2.11**

Source code: <https://github.com/scalapenos/stamina.git>

rebuilding 2 releases of com.scalapenos:stamina_2.11:

- 2 releases were found successfully **fully reproducible** (100% reproducible artifacts ✓),
- 0 had issues (some unreproducible artifacts ⚠, see eventual 🔍 diffoscope and/or 📄 issue tracker links):

version	build spec	result: reproducible?	size
0.1.6	sbt jdk8	24 ✓	146K
0.1.5	sbt jdk8	24 ✓	146K

PLEASE use only LTS for release

What's next?

for the JVM... and Beyond...

- Maven:
 - make more Maven plugins produce Reproducible output
 - help more projects enable Reproducible Builds
- Gradle:
 - help more projects enable Reproducible Builds
 - improve Reproducible Central rebuilds for these
- sbt
- npm & npmjs
- pip & PyPI
- .NET & NuGet Gallery
- ...

for the ASF: please audit your binaries during VOTES

Herve Boutemy - lundi 2 octobre 2023 04:11:02 UTC-3

+1

but Reproducible not fully ok: reference build done with JDK 17 on *nix and umask 022
apache-maven-3.9.5-bin.zip and .tar.gz suffer from weird umask (go-r) on wagon jars:

```
$ diffoscope target/reference/org.apache.maven/apache-maven-3.9.5-bin.zip apache-maven/target/apache-maven-3.9.5-bin.zip  
--- target/reference/org.apache.maven/apache-maven-3.9.5-bin.zip  
+++ apache-maven/target/apache-maven-3.9.5-bin.zip  
| - Archive contents identical but files differ, possibly due to umask  
| - zipinfo {}
```

it's ok not to be RB perfect

Herve Boutemy - lundi 2 octobre 2023 18:50:11 UTC-3

+1

Reproducible Builds now ok: reference build done with JDK 17 on *nix and umask 022

next time will be better

```
mvn -Papache-release -Dgpg.skip clean verify artifact:compare
```

```
-Dreference.repo=https://repository.apache.org/content/repositories/staging/
```

Merci

Diversity in Community is Great,
not in Binary Code
